

## **EU Deforestation Regulations (EUDR) Policy Statement**

In line with the EU Deforestation Regulation (EUDR), we are committed to ensure that all materials covered by the regulation and used in our products are legally produced and sourced.

We work closely with our suppliers to better understand where our materials come from and how they are produced. This includes requesting information to confirm the origin of relevant materials and assessing potential risks within our supply chain.

Our approach also considers the laws and regulations of the countries where these materials are produced, including those related to land use, environmental protection, and respect for human rights and the rights of Indigenous Peoples.

As the EUDR continues to develop, including the European Commission's introduction of its country risk benchmarking, we will adapt our processes as needed.

By taking these steps, we aim to play our part in reducing deforestation, protecting ecosystems, and supporting responsible sourcing, while continuing to provide products and services that our customers can trust.
