CL1000A, shown with TTSS-HH probe, sold separately.

OMEGA's CL1000 Series mini hot point® dry block probe calibrator offers a fast, accurate, stable solution for calibrating temperature probes in both the laboratory and in the field by providing a lightweight, rugged miniature design. There are 4 different probe well styles available (shown on next page). The CL1000 Series has been engineered into a custom fabricated metal enclosure together with a high performance

$\frac{1}{32}$  DIN controller, and has been designed to meet a high level of quality, reliability and safety. The calibrator has a temperature calibration range of ambient 10 to 260°C (ambient 20 to 500°F) and can operate in an environment of 0 to 50°C (32 to 122°F) and a relative humidity of 0 to 90% non-condensing.

**Caution:** To avoid fire hazard or damage to your calibrator, always allow your calibrator to cool down to ambient temperature before returning to storage.

We make running changes when technical advances allow. Check at time of ordering for additional features.
