FS10A Features

- For Gases and Liquids
- Use In Tube Tees or SP76 (NeSSI) Systems
 - Requires Only One SP76 Block
- Superior Low Flow Sensing
- Single Configuration Meets All Flow Ranges, 100:1 Turndown
- Simple Push-Button Field Set-Up
- LED Array Shows Flow Rate and Switch Trip
- Variety of Standard Outputs
 - Relay or Open Collector
 - 4-20 mA Analog Output Option
 - Serial RS232C I/O
- No Moving Parts, Non-Clogging
- No Cavities or Dead-Legs
- Simple, Screw-In and Compression Fitting Installation
- Lowest Cost Solution for End-Users and System Integrators

The FS10A is a universal flow monitor and switch specifically designed for gas and liquid process analyzer sampling systems. The FS10A is a fast responding, highly repeatable sensor which installs easily into a standard tube tee fitting or new SP76 (NeSSI) modular manifold.

The FS10A utilizes proven thermal-dispersion flow measurement technology with FCI proprietary equal mass sensing to achieve outstanding sensitivity and repeatability. The instrument's wetted parts are superior corrosion-resistant 316L stainless steel with Hastelloy C-22 sensor tips. An optional all Hastelloy C-22 sensor element is also available. The sensor element has no moving parts to foul, clog or maintain which ensures continuous reliability and no maintenance costs. There are no cavities, orifices or dead-legs to trap or contaminate samples which preserves sample integrity and faster system sampling times.

FS10A electronics are packaged in a rugged, fully-sealed, aluminum housing which provides exceptional protection and long-life under all process conditions.

The electronics can be integral mounted with the sensor element resulting in unibody, self-contained unit (FS10A-1, FS10A-2) or the electronics can be separated from the sensor for remote mounting

(FS10A-A, FS10A-B). The remote configuration is useful when sensor installation area is subjected to high temperatures, or to mount the front panel and display in a more accessible location.

The instrument provides a top-mounted, flow rate monitoring LED array for at-a-glance visual indication of proper flow rate to the analyzer or sampling system, an alarm/trip indication, and as confirmation that the unit is powered and operating. The flow switch's setpoint is conveniently user settable via two push-buttons accessible at the top of the unit, or via its RS232 serial interface.

A choice of electronic outputs is available. The switch output can be either an open collector (n-channel) or a 1A relay settable for NO or NC operation. The switch settings are user programmable for trip control of hysteresis and time delay. Also included standard is a 4-20 mA output for flow rate trending or it can be assigned to temperature.

FS10A has a common 1/4 inch NPT (male) connection for threading into standard tube tee fittings or FCI's SP76 base. Electrical and electronic connections at the FS10A are via a standard M12 connector or a fixed cable gland with tinned and marked wire leads for user's connections.

Flow Element

Materials of Construction: (Wetted parts) 316L stainless steel with Hastelloy C-22 thermowells; optional, all Hastelloy C-22 probe assembly

Operating Temperature

Standard: -40 °F to 250 °F [-40 °C to 121 °C]

Optional: -40 °F to 500 °F [-40 °C to 260 °C];
remote configuration only

Operating Pressure

Tube tee fitting: Tube tee and insertion – 2000 psig [137 bar (g)]

SP76 adapter: Per SP76 manifold specifications up to 500 psig [34 bar (g)] maximum

Enclosure / Housing

Material: Stainless steel body; aluminum end-cap/top with polyester overlay and clear, silicone sheath impact guard

Protection Ratings

Non-Ex installations: IP65, IP66, IP67

FM, FMc approved: NEMA 4X

ATEX, IECEx approved: IP64

Transmitter / Electronics

Operating Temperature: -40 °F to 160 °F [-40 °C to 71 °C]

* 500 max. load; user scalable, general purpose, uncalibrated output proportional to flow rate for trend monitoring or assignable to temperature; fault indication per NAMUR NE43 guidelines, user-selectable for high (>21.0mA) or low (<3.6mA) default

For linearized and calibrated analog outputs, see FCI's line of thermal mass flow meter products

Display: 10 LED array, red; sequential lighting proportional to flow trend and flashes at setpoint

User Interface: Two top-mounted push buttons to program switch/trip point, zero and span setting, relay hysteresis and time delay; button operation may be user disabled to prevent unwanted changes; all set-up functions also programmable via RS232C port

Input Power: 24 Vdc (21.5 Vdc to 30 Vdc); maximum 2.5 watts

Remote Configuration: Transmitter/electronics are separated from the flow element and interconnected with a cable; flow element has potted cable terminating in an M12 for direct plug-in connection with the electronics; cable lengths available in 6', 15' and 30' [2 m, 5 m or 10 m] lengths; optional extended temperature service to 500 °F [260 °C] requires selection of the interconnecting cable with PTFE jacketing
